

SPIKE & SPIKE 22

in-lite introduces the SPIKE and SPIKE 22. These newcomers to the accessory range make it possible to install ground lights like the FUSION, HYVE and FLUX easily and securely in loose surfaces like grass and gravel. The ground lights are easily to place using the SPIKE ground spike. The SPIKE and

spotlight are then pushed into the desired location in the yard. To make it even easier to install a spot with the SPIKE, it is advisable to first dig or drill an appropriately sized hole first. The SPIKE can then easily be pushed into place by hand and the hole filled with sand, gravel or soil.

The result: a securely placed in-lite ground spot.
